Lines & Angles

Lines:

Lines are drawn from one point to another.

Lines can be straight, curved or wavy.

Angles:

- Angles are the point at which two lines meet.
- Angles are measured by degrees.
- A 180 degree angle, would actually make a straight line.
- A 90 degree angle would be two lines that meet perpendicularly.
- An inside angle is one that is inside a shape.
- An outside angle is one that is outside a shape.
