3D Tangram Cube

Instructions

- 1) Cut out this model (preserving the tabs).
- 2) Fold the 6 sides of the tangram.
- 3) Fold the tabs.
- 4) Tape or glue the tangrams together.

Quick Tips:

- * If you want to color the cube, color it before cutting it out.
- * The tangram with other tangrams surrounding its every side is the Base.
- * Lay the model printed-side down.
- * Fold up the sides around the Base.
- * Fold all sides and tabs before taping anything.
- * One by one, tape the tabs on the sides surrounding the Base. Use small strips of tape (about 1/2 inch).
- * Each time tape is applied to a tab, secure that tab to a side.
- * Tape the tab, THEN move the tab inside the cube to tape the tab to the side.
- * The hardest part will be taping shut the Lid. Put tape on ALL of the tabs of the Lid, then tuck them in. Squeeze the cube in order to get the tape on the Lid's tabs to stick to the sides.
